Chiropractic Treatments – Phone Scripts

ABC (Advanced Biostructural Correction):

Our chiropractors use gentle hands-on adjustments to the spine and ribs, to improve posture and overall body alignment, so your body moves and feels better naturally.

Jill's Treatment:

Jill uses a style of treatment that combines chiropractic adjustments with a variety of soft tissue treatments to help ease pain, improve posture, and make movement easier.

Dry Needling & Soft Tissue Work:

Our chiropractors use techniques like Dry Needling, Trigger Point Therapy, and Gua Sha to release tight muscles, reduce tension, and help you move more comfortably.

Infant Chiropractic:

Matt offers gentle chiropractic care for babies to support their comfort and healthy development. Matt will carefully check your baby's spine, joints, and posture using very light, safe techniques. This helps ease any tension and supports their natural growth.

Matt offers appointments at both Joondalup (Monday between 1-1.30pm only) and Yanchep locations.

Children Chiropractic:

Our chiropractors offer gentle chiropractic care for children to support their growth and overall wellbeing. They will assess posture, movement, and musculoskeletal function, and provide age-appropriate care to help your child move comfortably and feel their best as they grow.

Endonasal Cranial Correction:

A technique that uses a small, inflatable balloon inserted into the nasal cavity to adjust and restore proper alignment of the skull and face.

Soft Tissue Therapy Techniques:

Activator Method®

This technique uses a small handheld spring-loaded device called an Activator® to deliver a gentle impulse to specific areas of the spine or extremities. It is designed to support nervous system balance and musculoskeletal comfort.

Diversified Technique

A widely used chiropractic approach, Diversified focuses on restoring spinal alignment and improving joint mobility. Through careful, hands-on adjustments, this technique aims to reduce stiffness and encourage natural movement.

Dry Needling

Dry needling involves inserting fine sterile needles into muscle trigger points to help relieve tension and improve muscle performance. It is often used to support recovery and mobility in people with musculoskeletal discomfort.

Gua Sha

This soft tissue technique uses a smooth handheld tool to massage the muscles and fascia. Gua Sha helps improve circulation, ease tension, and may assist with discomfort linked to repetitive use.

Sacro Occipital Technique (SOT®)

SOT® focuses on the connection between the pelvis, spine, and skull to encourage balance and comfort. Chiropractors use gentle adjustments and specialised supports to promote better alignment.

Thompson Drop Table Technique

This method uses a specially designed chiropractic table with padded platforms that drop slightly during an adjustment. The light motion assists gentle spinal adjustments with minimal force.

Trigger Point Therapy

Trigger Point Therapy targets tight or sensitive areas in the muscles. By applying sustained pressure with the fingers, thumbs, or elbows, these points are encouraged to release, which may help ease discomfort and restore flexibility.
